Professional Summary:

Experienced Software Engineer with a proven track record of delivering innovative solutions for over 10 professional projects.

Work Experience

Ati Shahr - [2022]-[Now]

Messaging System

- Developed a messaging system for SMS and push notifications with integrated priority management.
- Utilized **Redis Streams** for message queuing, ensuring efficient, real-time processing and priority-based delivery.

Mock Server

- Built a mock server application with FastAPI to allow user-defined APIs and customizable response templates.
- Integrated Jinja2 templating for dynamic, flexible response generation.

Real-Time User Analytics System

- Led the development of a high-throughput analytics system using FastAPI, ClickHouse, RabbitMQ, and WebSockets.
- Enabled real-time data handling of 1M+ events/hour with RabbitMQ and WebSockets, supporting seamless data delivery.
- Developed dynamic user segmentation and automated personalized marketing triggers to drive user engagement.

B2C Tourism Platform

- Contributed to a tourism B2C platform with 3M+ registered users and integrations with 9+ B2B platforms.
- Enhanced a multi-variable payment system to handle diverse payment modes (IPG, MPG, WPG, POS) based on service type, B2B provider, and payment provider.
- Introduced asynchronous features to optimize performance, reducing system slowdowns.

SIB (Ticket System)

- Optimized a key reporting endpoint, achieving a 20x performance boost and eliminating slowdowns under high loads.
- Contributed to the project's second version using FastAPI, implementing asynchronous features to handle increased system load.

Mehr Pars - [2021]-[2022] (Python Developer)

Organizational Resource Management System

- Developed a migration module with object-oriented programming, enabling seamless transitions from legacy project management systems to the Rainesh platform, improving customer satisfaction.

Comprehensive Warehouse System

- Built a fuzzy reverse proxy module for a large-scale warehouse project, simulating backend conditions under high load. Reduced error rates and improved user experience.

Open Source

PyBotNet Framework Maintainer

- Maintainer of [PyBotNet](#), a high-level Python remote control framework with Telegram integration.

Technical Skills:

- Python:** Proficient in OOP, decorators, async programming, and WebSocket integration.
- Web Development:** FastAPI and Django frameworks.
- Databases:** PostgreSQL, ClickHouse, and Redis.
- Testing:** Pytest.
- Systems:** Linux-based administration.
- Security:** Familiar with core concepts and best practices.
- Containerization:** Docker for deployment.
- Version Control:** Git for collaborative development.
