Professional Summary

Software Engineer with extensive experience architecting high-concurrency backend systems and real-time platforms serving millions of users. Proven success in technical leadership and delivering scalable solutions using Python, Go, and distributed technologies.

Work Experience

Aria Hamrah - 2025-Present

Payment Gateway

- Architected a high-concurrency payment gateway in **Go**, ensuring transaction safety via **Redis distributed locking** and **idempotency**. Implemented a modular **adapter architecture** for seamless multi-provider integration.

Meter Data Management System

- Developed a **Go** backend that collects meter data and runs a multi-tier billing engine to automatically generate detailed PDF invoices.

Top - 2023-2025

B2C Tourism Platform

- Designed and built a large-scale **tourism platform (3M+ users, 9+ B2B partners)** with **multi-gateway payment** orchestration and asynchronous, **cached** processing to reduce latency and database load.

Real-Time User Analytics System

- Built a high-throughput analytics system** with a visual **Journey Builder** to automate personalized user flows, engagement triggers, and A/B tests; powered by FastAPI, ClickHouse, and RabbitMQ.

Messaging System

- Built a priority-managed messaging system (SMS & Push) using **Redis Streams** for efficient, real-time message queuing.

Real-Time Taxi POS Backend

- Developed a **WebSocket-powered** system for real-time **POS payments** and **live location streaming**.

AI-Powered Supermarket Agent

- Built an automated shopping assistant for WhatsApp, enabling users to place orders via voice or text, with the AI handling product search, cart management, and order creation.

Atishahr - 2022-2023

SIB Ticket System

- Optimized a key reporting endpoint, achieving a **20x performance** improvement and eliminating slowdowns under high load.
- Contributed to the project's second version using FastAPI, implementing **asynchronous features** to handle increased system load.

Mehr Pars - 2021-2022

Organizational Resource Management System

- Engineered a **data migration** solution, enabling seamless transitions from legacy project management systems to the Rainesh platform, improving customer satisfaction.

Comprehensive Warehouse System

- Developed a **Load-Simulating Reverse Proxy** module for a large-scale warehouse system, simulating backend conditions under high load to improve frontend stability and user experience.

Open Source

- PyBotNet**, A Python remote control framework with Telegram integration.
- Muxr**, A Golang WebSocket multiplexing library for efficient real-time communications.
- IP**, A Golang TCP server that returns the client's IP and country in multiple formats.
- PriceBot**, A Golang Telegram bot that provides real-time updates for currency exchange rates, gold prices, and cryptocurrency values.
- Social Token Experiment**, A minimalist ERC-20 social token on the Polygon network, designed as an experiment in on-chain communication.

Technical Skills:

- Python, Go**
- Web Development:** **FastAPI, Gin**
- Blockchain / Smart Contracts:** **Solidity** and **web3.py**
- Databases:** **PostgreSQL, MongoDB, ClickHouse, and Redis**
- Systems:** **Linux** administration, **Docker**
- Security:** **JWT, Encryption, OWASP** best practices
- Version Control:** **Git** for collaborative development and **CI/CD** pipelines

Soft Skills

- Leadership & Collaboration:** Led a 3-member team, guiding design and reviews while cultivating collaboration through mentoring and documentation.

Education

- Bachelor of Science in Civil Engineering**

Languages

- English:** Professional Working Proficiency
