

Saman Nezafat

Github: github.com/onionj | **Email:** samannzft@gmail.com | **LinkedIn:** www.linkedin.com/in/samannzft

Professional Summary

Experienced Software Engineer with a proven track record of delivering innovative solutions for over 10 professional projects.

Work Experience

Top - 2023-Present

B2C Tourism Platform

- Contribute to a **tourism B2C platform with 3M+ registered users** and **integrations with 9+ B2B platforms**.
- Enhanced a **multi-variable payment system** supporting diverse payment modes (IPG, MPG, WPG, POS) based on **service type, B2B provider, and payment provider**.
- Introduced **asynchronous features** to optimize performance, reducing system slowdowns.

Real-Time User Analytics System

- Built a **high-throughput analytics** platform with **FastAPI, ClickHouse, RabbitMQ, and WebSockets**.
- Implemented **real-time event streaming, dynamic user segmentation, A/B testing, and automated** engagement triggers.
- Developed a **Journey Builder** to design personalized user flows, automating actions like notifications, discounts, and user behavior checks using **conditional logic**.

Messaging System

- Developed a messaging system for SMS and push notifications with integrated **priority management**.
- Utilized **Redis Streams** for message queuing, ensuring efficient, real-time processing and priority-based delivery.

Real-Time Taxi POS Backend

- Developed a **WebSocket-powered** system for real-time **POS payments** and **live location streaming**.
- Implemented real-time driver payment reporting and live location tracking via WebSockets.

Mock Server

- Built a mock server application with FastAPI to enable **user-defined APIs** and customizable response templates.
- Integrated Jinja2 templating for dynamic, flexible response generation.

Atishahr - 2022-2023

SIB Ticket System

- Optimized a key reporting endpoint, achieving a **20x performance** improvement and eliminating slowdowns under high load.
- Contributed to the project's second version using FastAPI, implementing **asynchronous features** to handle increased system load.

Mehr Pars - 2021-2022

Organizational Resource Management System

- Developed a **migration module using OOP**, enabling seamless transitions from legacy project management systems to the Rainesh platform, improving customer satisfaction.

Comprehensive Warehouse System

- Developed a **fuzzy reverse proxy** module for a large-scale warehouse system, simulating backend conditions under high load to improve frontend stability and user experience.

Open Source

- **PyBotNet**, A Python remote control framework with Telegram integration.
- **Muxr**, A Golang WebSocket multiplexing library for efficient real-time communications.
- **IP**, A Golang TCP server that returning the client's IP and country in multiple formats.
- **PriceBot**, A Golang Telegram bot that provides real-time updates for currency exchange rates, gold prices, and cryptocurrency values in Iran's market.

Technical Skills:

- **Python:** Proficient in **OOP, decorators, Async** programming and **testing**
- **Go:** **Goroutine, channel, concurrency** patterns, and **testing**
- **Web Development:** **FastAPI** and **Echo**
- **Blockchain / Smart Contracts:** **Solidity** and **web3.py**
- **Databases:** **PostgreSQL, ClickHouse, and Redis**
- **Systems:** **Linux-based** administration
- **Security:** Familiar with core concepts and best practices
- **Version Control:** **Git** for collaborative development and **CI/CD** pipelines
