

Professional Summary:

Experienced Software Engineer with a proven track record of delivering innovative solutions for over 10 professional projects.

Work Experience

Atishahr - [2022]-[Now]

B2C Tourism Platform

- Contributed to a tourism B2C platform with 3M+ registered users and integrations with 9+ B2B platforms.
- Enhanced a multi-variable payment system to handle diverse payment modes (IPG, MPG, WPG, POS) based on service type, B2B provider, and payment provider.
- Introduced asynchronous features to optimize performance, reducing system slowdowns.

Real-Time User Analytics System

- Built a high-throughput analytics platform with FastAPI, ClickHouse, RabbitMQ, and WebSockets.
- Implemented real-time event streaming, dynamic user segmentation, A/B testing, and automated engagement triggers.
- Developed a **Journey Builder** to design personalized user flows, automating actions like notifications, discounts, and user behavior checks using conditional logic.

Messaging System

- Developed a messaging system for SMS and push notifications with integrated priority management.
- Utilized **Redis Streams** for message queuing, ensuring efficient, real-time processing and priority-based delivery.

Mock Server

- Built a mock server application with FastAPI to allow user-defined APIs and customizable response templates.
- Integrated Jinja2 templating for dynamic, flexible response generation.

SIB Ticket System

- Optimized a key reporting endpoint, achieving a 20x performance boost and eliminating slowdowns under high loads.
- Contributed to the project's second version using FastAPI, implementing asynchronous features to handle increased system load.

Mehr Pars - [2021]-[2022] (Python Developer)

Organizational Resource Management System

- Developed a migration module with object-oriented programming, enabling seamless transitions from legacy project management systems to the Rainesh platform, improving customer satisfaction.

Comprehensive Warehouse System

- Built a fuzzy reverse proxy module for a large-scale warehouse project, simulating backend conditions under high load. Reduced error rates and improved user experience.

Open Source

- Maintainer of [PyBotNet](#), a high-level Python remote control framework with Telegram integration.
- Developed [Muxr](#), a Go WebSocket multiplexing library for efficient real-time communication.
- Built [IP](#), a TCP server written in Go that returns the client's IP and country in multiple formats.

Technical Skills:

- Python:** Proficient in OOP, decorators, async programming, and testing
- Go:** Goroutines, channels, concurrency patterns, and testing
- Web Development:** FastAPI and Echo
- Databases:** PostgreSQL, ClickHouse, and Redis
- Systems:** Linux-based administration
- Security:** Familiar with core concepts and best practices
- Version Control:** Git for collaborative development and CI/CD pipelines
